

Sprint 4 User Stories

1.client can approve and reject milestones

UAT 1: Milestone Approval or Rejection by Client

User Story:

As a client, I want to approve or reject submitted milestones so that I can ensure work is progressing according to expectations.

Scenario 1: Approving a Milestone

Given the client is logged in and a milestone has been submitted by the freelancer

When the client chooses to approve the milestone

Then the system marks the milestone as approved and notifies the freelancer

Scenario 2: Rejecting a Milestone

Given the client is logged in and a milestone has been submitted by the freelancer

When the client chooses to reject the milestone and provides a reason

Then the system marks the milestone as rejected, saves the reason, and notifies the freelancer

Then the system marks the milestone as rejected, saves the reason, and notifies the freelancer

2.freelancer can submit their work through a link

UAT 2: Freelancer Work Submission via Link

User Story:

As a freelancer, I want to submit my work via a link so that the client can access and review my deliverables.

Scenario:

Given the freelancer is logged in and a milestone is ready for submission

When the freelancer submits a link to the deliverable

Then the system stores the link, updates the milestone status to “submitted”, and notifies the client

3.client can reject freelancers and send a message to the freelancer to be displayed

UAT 3: Client Rejects Freelancer and Sends Message

User Story:

As a client, I want to reject a freelancer and send them a message explaining the reason so that communication is clear and documented.

Scenario:

Given the client is logged in and a freelancer is assigned to a project

When the client clicks "Reject Freelancer" and submits a message

Then the system removes the freelancer from the project and displays the message to the freelancer

4.Client can accept a freelancers work and be redirected to payment

UAT 4: Client Accepts Freelancer's Work and Is Redirected to Payment

User Story:

As a client, I want to accept the freelancer's work and proceed directly to the payment page so that I can complete the transaction efficiently.

Scenario:

Given the client is logged in and there is a submitted milestone

When the client accepts the work

Then the system updates the milestone status to "approved" and redirects the client to the payment page

5.client can pay a freelancer per milestone

UAT 5: Client Pays Freelancer Per Milestone

User Story:

As a client, I want to pay freelancers per milestone so that I can manage project expenses incrementally.

Scenario:

Given a milestone has been approved

When the client initiates payment

Then the system processes the payment for that specific milestone and marks it as "paid"

6.freelancer can see reports

UAT 6: Freelancer Views Reports

User Story:

As a freelancer, I want to view reports of my projects and earnings so that I can track my performance and income.

Scenario:

Given the freelancer is logged in

When the freelancer navigates to the Reports section

Then the system displays a summary of milestones, payments, and project statuses

7.freelancer can download report as pdf

UAT 7: Freelancer Downloads Report as PDF

User Story:

As a freelancer, I want to download my reports as a PDF so that I can save or print them for personal or financial records.

Scenario:

Given the freelancer is viewing the reports page

When the freelancer clicks the "Download as PDF" button

Then the system generates and downloads a PDF version of the report
